

Audit Trail

An audit trail is a time-stamped record of important activities on a system. Recorded events can include the whole user-issued commands (insert, update & delete). **ESKA® Audit Trail** saves these records and enables system admins to monitor system actions at the component and module level. **ESKA Audit Trail** is very user-friendly, which facilitates the tracking and auditing processes.

Key Features

- Real-time auditing
- Powerful backup generation
- Data loss reduction
- Improved controlling and monitoring of system usage
- Enhanced transactions search
- Efficient breach prevention
