

Business Intelligence System - BI

ESKA® Analytics enables you to gather enormous amounts of data in diverse formats from various data sources based on the Big Data model.

ESKA Analytics allows you to model your enterprise information into storyboards in a variety of diagramming formats using a rich library of visualization tools. It also functions as a fully Web-based and cross-platform system that is mobile and tablet responsive.

ESKA Analytics covers functions related to:

- Diverse data import capabilities
- Big Data processing and manipulation
- Advanced business analytics
- Dynamic querying and reporting
- Data visualization and dashboard
- Customized enterprise user storyboards
